nonStick red

The new bipolar forceps from KLS Martin –
with nonStick effect and a revolutionary
ergonomic design

„With the new KLS Martin bipolar nonStick red forceps, tissue sticking to the tips of the instrument is definitely a problem of the past.

Especially for operations involving extremely fine dissection (such as parotid and thyroid interventions or microvascular tissue transfer), the use of this new generation of bipolar forceps provides significant advantages due to their exceptional haptic quality: minimized risk of procedures, gentler operating technique and shorter operating times. The tips of the instrument need to be cleaned considerably less often during interventions and the cleaning process itself is much faster as well.

We simply wouldn't like to do without these forceps.“

Dr. Paul-Stefan Mauz (M.D.)
Senior Consultant
Tübingen University Hospital
Department of Otorhinolaryngology

nonStick red

The new bipolar forceps from KLS Martin – with nonStick effect and a revolutionary ergonomic design

The new generation of bipolar forceps

Who hasn't encountered this everyday operating situation when working with conventional bipolar forceps? The tissue tends to stick to the tips of the instrument during coagulation and when withdrawing the instrument, the coagulated tissue is torn open again.

The result is renewed bleeding. Now, this unwelcome effect can be prevented by using KLS Martin nonStick red, the new and innovative generation of bipolar forceps – the coagulated tissue is no longer disrupted when opening the instrument.

What's more, the cumbersome and time-consuming process of cleaning the tips of the forceps during operations is largely eliminated at the same time. This means fewer interruptions of the surgical procedure and corresponding time savings.

nonStick red

Coagulating produces so-called „hot spots“.

Thanks to the special silver alloy used for the tips of the forceps, the heat can be discharged quickly and effectively.

This prevents the tissue from sticking to the tips of the forceps.

Standard forceps

Coagulating produces so-called „hot spots“.

As the heat cannot be discharged, overheating is the inevitable result.

Tissue tends to stick to the tips of the forceps. When opening the instrument, charred tissue is torn off in the process.

Thermography image of the nonStick red forceps

Improved heat conductivity

A special feature does the trick – polished silver tips offering excellent heat conductivity. Thanks to this property, the tissue cannot adhere to the tips of the forceps.

The heat is discharged from the tips quickly and effectively. And what's more, the nonStick effect will last because the tips are not merely coated, but made of solid noble metal.

Thermography image of a standard bipolar forceps

Heat conductivity standard forceps

The thermography image shown here demonstrates that in the case of a standard bipolar forceps, the heat becomes trapped at the tips of the forceps. The heat cannot be quickly and effectively transported away. The tips of the forceps become clogged with tissue as a result.

nonStick red

Variety of models

The new bipolar nonStick red forceps from KLS Martin are available in all usual sizes for the most diverse fields of use.

The tips of the forceps

The tips are precision-made and available in different sizes for extremely accurate surgical use. By adjusting the pressure applied, the user can coagulate merely with the tips or by using the full surfaces.

The polished silver-metal tips are excellent heat conductors preventing tissue adhesion.

marSIGHT

The special geometry of the forceps tips gives the surgeon an unobstructed view of the surgical site and the tissue to be coagulated. Moreover, the tips enable you to grasp tissue with utmost precision. Don't miss out on the experience!

The models featuring tips with marSIGHT geometry are clearly marked in this brochure.

revolutionary ergonomic design

Guiding mechanism

The guiding mechanism ensures the accurate, highly parallel closure of the pre-tensioned forceps and prevents „tip spread“ as well. This, in turn, prevents fatigue in the user’s hand and facilitates the dissecting process.

Connection

The bipolar nonStick red forceps can be used with any commonly available HF generator. Special connecting cables are available for this purpose.

marGRiP

The ergonomic handle surface provides for secure handling and prevents fatigue in the user’s hand.

Shank geometry

Thanks to the view-optimized geometry of the shanks of the forceps, the surgeon’s hand and the cable connector are kept out of the surgical field. This is particularly advantageous when working under the operating microscope.

Storage and transport

To store and transport your nonStick red forceps safely and securely, we recommend using the new KLS Martin mesh tray system.

A lid is optionally available for each tray size, to be easily locked in place by simply folding down the tray handles.

The forceps can be fixed in place in the tray fully in accordance with your needs.

Fixing elements are available as 6-item strips with three holding clips. However, you can easily cut up the strips with a pair of scissors – just as you need it.

For forceps with a maximum length of 23 cm, we recommend the following configuration:

Item No.	Designation	Quantity
55-804-25-01	Mesh tray, 243 x 255 x 53 mm	1
55-805-28-01	Lid, 243 x 255 mm	1
Fixing elements		
55-806-02-04	Clip for fixing element (10/pack)	1
55-806-07-04	Fixing element (6/pack)	2

For forceps longer than 23 cm, a ¾-size tray should be used.

Item No.	Designation	Quantity
55-804-42-01	Mesh tray, 410 x 255 x 53 mm	1
55-805-45-01	Lid, 410 x 255 mm	1
Fixing elements		
55-806-02-04	Clip for fixing element (10/pack)	1
55-806-07-04	Fixing element (6/pack)	2

Item No.	Designation	Quantity
55-804-19-01	marTray®, mini for Arthroscopy 277 x 84 x 36 mm	1

For an overview of the whole range of KLS Martin HF products, please refer to our Catalog "Accessories for electrosurgery".

The respectful treatment of people, society and the environment has always been a matter of course to us. By design, most of our products can be recycled and used over many years, thus saving resources and reducing waste. Environment-friendly and recyclable materials are used also for our production processes, and energy and water consumption monitoring is a top priority as well. A case in point: our largest manufacturing site includes a heat recovery plant for efficient energy utilization. These and many other measures are clear evidence of our environmental commitment.
