

Precision with Bite

The word "Shark" in a stylized, white, italicized font with a shark's head silhouette integrated into the letter 'S'.

The resectoscopes from Richard Wolf

Consistently efficient

Progress at every level.

Richard Wolf resectoscopes for urology have formed a platform for the therapeutic and diagnostic interventions at the highest level for many decades.

The **SHARK Resectoscope Line**, now takes quality, control and safety to a new dimension. **SHARK** combines years of global experience and user feedback with innovative technology. The result is a high-quality system with absolutely no compromises that makes your work more efficient. You are able to connect and disconnect the system elements with one simple action. Quick connection is combined with high stability. See for yourself!

- **SHARK-fin finger support**
for comfortable handling

- **Innovative HD Pendul camera head**
rotates 360° and able lock in any position

- **Soft stop**
for comfortable and fatigue-free working – particularly for longer interventions

- **Ergonomic overall design**
Consistent ergonomically designed working elements for more efficiency and control
- **Quality in your hands**
Stainless steel, ceramic, and biocompatible plastics guarantee maximum service life

- **Perfect shape for your work**
This was also confirmed by the prestigious International Forum Design (iF). Our **SHARK Resectoscopes** were awarded the coveted iF Product Design Award 2013. Alongside quality of design, the assessment criteria also include finish, functionality and ergonomic styling.

Precision and ergonomic design

Precision at the cutting edge: Newly designed sheath system

■ **"SHARK-tip"**

The oblique sheath tip at the distal end made of black ceramic permits focused irrigation and prevents reflection of light

■ **Freedom of choice**

Continuous irrigation sheaths and variety of intermittent sheaths

■ **Freedom of movement** Double sheath system with 360° rotatable inner sheath

■ **Freedom of connection**

Inner and outer sheaths connectable in any position

■ **Optimalum flow**

Optimized irrigation stopcock with large cross-section and "SHARK-tip" geometry for ideal flow characteristics

All applications under control: Monopolar and bipolar working elements

- **Maximum diversity**
active and passive working elements with open or closed handle design, for left-handed and right-handed users
- **Ergonomic design**
with special "SHARK-fin" finger supports and enlarged thumb rings for comfort
- **Soft stop** for fatigue-free working
- **Torsion-resistant connector**
for all system components
- **Twist-lock**
for secure connection of telescope and working element.
- **Automatic snap-on electrode locking** for intuitive fixation of the electrode

New perspectives in detail

Stability at the cutting edge:
Robust electrode concept

- **Monopolar and bipolar versions**
- **Enhanced stability**
on the basis of the newly designed structure for the electrode fork
- **Precise electrode guidance**
through working element and telescope
- **Maximum diversity**
for every application
- **Automatic snap-on electrode locking** at the working element
- **Color coding**
for simplified assignment of system components

Perspectives in a changing world –
innovative PENDUAL camera head

- **Innovative PENDUAL**
Pendulum camera head for the
ENDOCAM Logic HD
Can also be aligned axially,
e.g. for rigid URS, PCNL, etc.
- **Snap-on connector** for a fast
connection with the telescope

- **ENDOCAM Logic HD:**
The controller features an easy to
operate touch display and an
on-screen display with intuitive
and intelligent menu navigation.
